HOW TO WRITE A SCIENTIFIC ARTICLE REVIEW

Summary Section

- What was the purpose of the experiment?
- What was the hypothesis?
- What methods were taken to test the hypothesis?
- Briefly, what were the overall results?
- What conclusions did the author(s) make based on the results?

Critique Section

- What are the limitations or strengths of the research?
- Could the author(s) be biased?
- Describe the rationality in the logic used to reach the conclusions.
- Is there sufficient data to reach the conclusions?
- What questions remain unanswered?
- What could future studies include?
- Does the research provide valuable knowledge to the scientific field? If so, what?

Tip: try to write the first draft of your summary without referring back to the article.
